

Key facts about Rhode Island's surface transportation system

July 2025

Investing in Rhode Island's transportation system improves road and bridge conditions and reduces driver costs

- A total of 72% of Rhode Island's major roads are in poor or mediocre condition. Driving on deteriorated roads costs Rhode Island motorists \$734 million a year – \$966 per driver – in the form of additional repairs, accelerated vehicle depreciation, and increased fuel consumption and tire wear.
- A total of 15% of Rhode Island's bridges are rated in poor/structurally deficient condition, meaning there is significant deterioration to the major components of the bridge. A total of 59% of the state's bridges were built prior to 1970. Many bridges that are 50 years or older may require significant rehabilitation or replacement.
- Vehicle travel in Rhode Island dropped by 39% in April 2020 due to the Covid-19 pandemic (as compared to the same month the previous year), but rebounded to 3% above pre-pandemic levels by 2024.
- The [Infrastructure Investment and Jobs Act](#) (IIJA), signed into law in November 2021, will provide \$1.5 billion in federal funds for highway and bridge investments in Rhode Island over five years, including a 29% increase over the previous federal surface transportation program. The IIJA is set to expire on September 30, 2026.
- Construction cost inflation, the erosion of motor fuel taxes due to inflation, improved fuel efficiency, and the adoption of hybrid and electric vehicles threaten the state's ability to keep pace with growing transportation needs. The Federal Highway Administration's national highway construction cost index, which measures the rate of inflation in labor and materials cost, increased 54% from the beginning of 2022 through the third quarter of 2024.

Roadway improvements can reduce traffic crashes and save lives

- From 2020 through 2024, 305 people died on the state's highways, an average of 61 annual fatalities. Rhode Island's traffic fatality rate of 0.66 fatalities per 100 million vehicle miles of travel is lower than the national average of 1.2.
- A total of 898 people were killed in traffic crashes in work zones in the U.S. in 2023, 34% higher than a decade ago. There were seven work zone fatalities in Rhode Island from 2019 to 2023. Work zone safety can be improved through the use of safety countermeasures including improved work zone design, improved driver messaging, high-visibility markings and speed enforcement.
- Traffic crashes in Rhode Island imposed a total of \$2.4 billion in economic costs in 2024. TRIP estimates that a lack of adequate roadway safety features, while not the primary factor, was likely a contributing factor in approximately one-third of all fatal traffic crashes, resulting in \$786 million in economic costs in the state in 2024. These costs include work and household productivity losses, property damage, medical costs, rehabilitation costs, legal and court costs, congestion costs, and emergency services.

Investing in our transportation system generates jobs, fosters economic recovery and growth, and improves safety

- Investments in the surface transportation system will boost Rhode Island's economy in the short-term by creating jobs and in the long-term will enhance economic competitiveness, stimulate sustained job growth, improve access and mobility, improve traffic safety, reduce travel delays, and improve road and bridge conditions.
- Roads and highways are the backbone of our economy, allowing Rhode Island motorists to travel 7.8 billion miles annually and moving a significant portion of the \$80 billion worth of commodities shipped to and from the state each year. But, conditions on the system are deteriorating, as the need for transportation improvements far outpaces the amount of state and federal funding available.
- The design, construction and maintenance of transportation infrastructure in Rhode Island supports approximately 12,000 full-time jobs across all sectors of the state economy. Approximately 206,000 full-time jobs in Rhode Island in key industries like tourism, retail sales, agriculture and manufacturing are completely dependent on the state's transportation network.

Latest data from the U.S. Census Bureau, USDOT, FHWA, BTS, ARTBA, NHTSA, and AAA compiled and analyzed by TRIP.
