Key facts about the U.S. surface transportation system  
January 2022

Investing in our transportation system generates jobs, fosters economic recovery and growth, and improves safety

• Investments in the surface transportation system will boost the nation’s economy in the short-term by creating jobs and in the long-term will enhance economic competitiveness, stimulate sustained job growth, improve access and mobility, improve traffic safety, reduce travel delays, and improve road and bridge conditions.

• Roads and highways are the backbone of our economy, allowing the nation’s motorists to travel 2.9 trillion miles annually and moving a significant portion of the $18.7 trillion worth of commodities shipped around the country each year. But, conditions on the system are deteriorating, as the need for transportation improvements far outpaces the amount of state and federal funding available.

• Vehicle travel in the U.S. dropped by 40% in April 2020 due to the Covid-19 pandemic (as compared to the same month the previous year), but rebounded to 3% above November 2019 levels by November 2021.

• The design, construction and maintenance of transportation infrastructure in the U.S. supports approximately 4 million full-time jobs across all sectors of the nation’s economy. Approximately 62.9 million full-time jobs in key industries like tourism, retail sales, agriculture and manufacturing are completely dependent on the transportation network.

Investing in the surface transportation system improves road and bridge conditions and reduces driver costs

• A total of 40% of major roads in the U.S. are in poor or mediocre condition. Driving on deteriorated roads costs motorists $141 billion a year – $621 per driver – in the form of additional repairs, accelerated vehicle depreciation, and increased fuel consumption and tire wear.

• A total of 7% of U.S. bridges are rated in poor/structurally deficient condition, meaning there is significant deterioration to the major components of the bridge. A total of 43% of U.S. bridges are at least 50 years old, an age when many bridges require significant rehabilitation or replacement.

• Since 2000, vehicle travel on the nation’s roads increased 19% and the population of the U.S. increased 16%.

• According to the Status of the Nation’s Highways, Bridges, and Transit, 23rd Edition, submitted to Congress by the USDOT in 2019, the U.S. faced a $786 billion backlog in needed repairs and improvements to its roads and bridges. The report recommended increasing the nation’s current $105 billion investment in roads and bridges by 29% to $136 billion annually to improve the conditions of roads and bridges, relieve congestion, and improve traffic safety.

• The Infrastructure Investment and Jobs Act (IIJA), signed into law by President Biden in November 2021, will provide $407 billion in funds for highway, bridge and transit investments in the U.S. over the next five years, including a 39% funding increase in FY 2022. IIJA investment in the nation’s roads and transit system will add an additional $82 billion in GDP per year over the next five years. The increased economic activity due to the IIJA will benefit U.S. residents – increasing disposable income by an average of $232 per household.

Roadway improvements can reduce traffic crashes and save lives

• From 2015 through 2019, 182,342 people died on the nation’s highways, an average of 36,468 annual fatalities. The U.S. has a traffic fatality rate 1.11 fatalities per 100 million vehicle miles of travel.

• A 2017 AAA Foundation for Traffic Safety report found that every $100 million spent on needed roadway safety improvements would reduce the number of traffic fatalities by 44 and serious traffic injuries by 760 over a 20-year period. Safety improvements needed include adding passing lanes, widening lanes and shoulders, adding medians, adding turn lanes, clearing roadside objects, installing barriers, adding centerline or shoulder rumble strips, adding a bicycle lane or path, improving pedestrian safety features, converting intersections to roundabouts, providing grade separation at intersections, improving intersection signalization, and improving rail crossings.

Latest data from the U.S. Census Bureau, USDOT, FHW, BTS, ARTBA, NHTSA, and AAA compiled and analyzed by TRIP.
