Key facts about the U.S. surface transportation system
July 2023

Investing in the surface transportation system improves road and bridge conditions and reduces driver costs

- A total of 40% of major roads in the U.S. are in poor or mediocre condition. Driving on deteriorated roads costs motorists $141 billion a year – $621 per driver – in the form of additional repairs, accelerated vehicle depreciation, and increased fuel consumption and tire wear.

- A total of 7% of U.S. bridges are rated in poor/structurally deficient condition, meaning there is significant deterioration to the major components of the bridge. A total of 43% of U.S. bridges are at least 50 years old, an age when many bridges require significant rehabilitation or replacement.

- Vehicle travel in the U.S. dropped by 40% in April 2020 due to the Covid-19 pandemic (as compared to the same month the previous year), but rebounded to 1% below pre-pandemic levels by 2022. Since 2000, vehicle travel on the nation’s roads increased 18% and the population of the U.S. increased 18%.

- The Infrastructure Investment and Jobs Act (IIJA), signed into law by President Biden in November 2021, will provide $304 billion in funds for highway and bridge investments in the U.S. over the next five years, including a 41% funding increase.

- The Federal Highway Administration’s national highway construction cost index, which measures labor and materials cost, increased by 28 percent during the first three quarters of 2022. Construction cost inflation, the erosion of motor fuel taxes due to inflation, improved fuel efficiency, and the adoption of hybrid and electric vehicles threaten the state’s ability to keep pace with growing transportation needs.

Roadway improvements can reduce traffic crashes and save lives

- From 2018 through 2022, 197,190 people died on the nation’s highways, an average of 39,438 annual fatalities. The U.S. has a traffic fatality rate of 1.35 fatalities per 100 million vehicle miles of travel.

- Nationwide, traffic fatalities began to increase in 2020, even as vehicle travel dropped dramatically due to the pandemic, and have remained elevated. In the U.S., from 2019 to 2022, the number of traffic fatalities increased by 19% and the traffic fatality rate per 100 million vehicle miles of travel increased 22%, even as vehicle travel decreased by 1% during that time.

- Traffic crashes in the U.S. imposed a total of $465 billion in economic costs in 2022. TRIP estimates that a lack of adequate roadway safety features, while not the primary factor, was likely a contributing factor in approximately one-third of all fatal traffic crashes, resulting in $155 billion in economic costs nationwide in 2022. These costs include work and household productivity losses, property damage, medical costs, rehabilitation costs, legal and court costs, congestion costs, and emergency services.

Investing in our transportation system generates jobs, fosters economic recovery and growth, and improves safety

- Investments in the surface transportation system will boost the nation’s economy in the short-term by creating jobs and in the long-term will enhance economic competitiveness, stimulate sustained job growth, improve access and mobility, improve traffic safety, reduce travel delays, and improve road and bridge conditions.

- Roads and highways are the backbone of our economy, allowing the nation’s motorists to travel 3.2 trillion miles annually and moving a significant portion of the $18.7 trillion worth of commodities shipped around the country each year. But, conditions on the system are deteriorating, as the need for transportation improvements far outpaces the amount of state and federal funding available.

- The design, construction and maintenance of transportation infrastructure in the U.S. supports approximately 4 million full-time jobs across all sectors of the nation’s economy. Approximately 62.9 million full-time jobs in in key industries like tourism, retail sales, agriculture and manufacturing are completely dependent on the transportation network.

Latest data from the U.S. Census Bureau, USDOT, FHWA, BTS, ARTBA, NHTSA, and AAA compiled and analyzed by TRIP.
